

Extension Climate Change Data Jam

December 1 – 2, 2016

The Challenge

Topic: Identify social, economic and or environmental challenges in Mexico, and your region that have been caused or exacerbated by climate change. Using your research, data analysis and/or modeling skills, explore aWhere's data and other available resources to investigate the scope, scale and future implications of the challenge.

Challenge: Each team will prepare a 10-minute presentation in which your team outlines their Extension Climate Change Plan of Work (ECC PW) challenge based on data jam research and training course material. Proposed ECC PWs should provide an evidence-based needs/scope of issues assessment, education and outreach programs and recommendations for addressing adaptation and mitigation issues identified in regions and or communities in Mexico.

Assessment Criteria

A panel will review and assess your presentations, ask questions, and provide feedback. They will assess based on the following criteria:

- Is the ECC Plan of Work identified specific and significant?
- Did the team presentation accurately and impactfully detail the challenge?
- Did the team creatively utilize aWhere's data or other information to conduct relevant analysis?
- Is the ECC Plan of Work presented innovative and realistic?

Presentation Guidelines

Consider the following while preparing your presentations:

- Where possible, incorporate visuals and analytics into your presentation, such as charts and tables.
- Practice your presentation in advance to ensure you can present within the time limit.
- Ensure you leave sufficient time to present your solutions: we recommend a 50-50 time split for the presentation of the challenge and your proposed solutions.
- Consider whether your presentation addresses the criteria set out above.
